a
coverage of the true gain
held-out centres K
centre-level t-interval
percentile bootstrap over centres
nominal 0.95
b
probability of passing
true gain in AUROC
obvious gate, K = 20
adopted gate, K = 20
adopted gate, K = 12
adopted gate, K = 30
c
recovered Δ AUROC (centre-level 95% t-interval)
univariate AUROC of the planted marker
gate passes
gate does not pass
gate margin +0.01
d
IPCW td-AUROC (leave-centre-out)
ordering bias γ (suspected cases get the panel more often)
full model
full model, presence feature removed
presence-only
